SIMPLICITY CRAFTED

Project Marble is a second-generation family business which is set in the heart of Mid-Ulster. We have over 30 years' experience crafting and creating bespoke interior design solutions for worktops, surfaces and marble fireplaces throughout Ireland and beyond.

Our 6000 sq ft manufacturing facility uses the latest technologies in stone fabrication, along with the craftsmanship of our highly skilled in-house team, which means we have complete control throughout the fabrication process.

Our Facility

You are welcome to visit our state-of-the-art marble decor showroom in Dungannon, Co. Tyrone to view our extensive range of quartz surfaces which have been specifically selected by our stone experts.

We pride ourselves in using the finest quality quartz material, which we couple with superior customer service and integrity. So, whether you want a classic feel or a modern twist we will help bring your dream kitchen to life!

What to bring to your appointment

We recommend you bring a tile or door sample (or both) with you while viewing our selection of worktops, this will allow you to see which style and colour of worktop will best suit your kitchen.

Why Quartz

Your kitchen is more than just an area for food preparation, it is considered the hub of your home and with that comes more traffic and ultimately mess. But quartz is the perfect solution; a man-made material, made with 90% of one of the hardest natural materials - quartz and 10% binders, making it extremely hard wearing. It is also a non-porous material, so it does not harbour bacteria and is simple to clean. When you couple this with the fact that it is highly scratch, stain, heat and crack resistant- you are onto a winner!

Along with the functionality benefits that quartz offers, it also leads the way in exceptional design options, so whether you are after dark earthy tones or a light natural feel, a quartz worktop will provide a rich and luxurious look to your kitchen.

The 4 main Project Marble quartz design ranges are:

1. Natural Range

Inspired by the natural design of stone such as marble and granite, this effect contains both light and dense patterns to create both uniform and sporadic textures throughout the piece.

Snowy Ibiza - Silestone

Rugged Concrete - Caesarstone

2. Concrete Range

Pushing the boundaries of industrial themes, our range of concrete effects provide a bold statement to any worktop.

3. Classic Range

An original quartz design which mimics aggregated stone, giving a uniform appearance. This design range has lasted the test of time.

4. Solid Range

Using grain so fine that it gives the appearance of a solely monotone effect

Key Quartz Benefits:

- ✔ 25 year warranty
- ✔ Highly scratch & stain resistant
- ✔ Easy care & maintenance*
- ✔ 37 colours available
- ✔ Design flexibility

Mirror chipping is a design feature found in three of our colours, Blanco Stellar, Aluminio Nube and White Shimmer. However, you might notice an extremely sparse glitter feature found in other colours; this is not considered a design feature and would be extremely faint.

*Care & maintenance for concrete design range differs from that of a polished finish.

PM Select Range

The PM Select range has been developed with you at its heart. We understand the stress that comes with designing your dream home, so we have made the process of selecting your quartz worktop as simple as possible.

Using our years of experience, we have put together our PM Select range, which consists of 37 of the best colours from our two trusted partners - Silestone and Caesarstone. These partners are two of the world leading quartz manufacturers and specialise in the design and manufacture of premium surfaces. They push the boundaries of innovation in terms of design and aesthetical appeal.

Both partners offer the finest quality of quartz surfaces which are highly stain, scratch and heat resistant; they will still look beautiful in years to come with minimal daily cleaning and come with a 25 year guarantee.

Our range is inspired by natural tones and contemporary finishes, allowing you to select your perfect colour, and design range before putting the bespoke finishes to your worktops with our selection of profiles, backsplashes, and upstands.

Please note, other colours are available outside of our range; to view them please visit our partners websites.

Rugged Concrete - Caesarstone

PM Select Group Index

Our PM Select range has been split into five price groups which offer the best colour solutions within a certain price band. Each group has the perfect array of colours, ensuring a suitable worktop for every budget!

Each worktop can be designed to be 20mm or 30mm thick, all products have a polished finish except Rugged Concrete and Cloudburst Concrete.

Outside of Group 5. Price available on request.

Profiles

Our selection of profiled edges means you can create a completely bespoke finish to your kitchen worktop. Below are the edges we have to offer:

Bevel Edge is our standard profile choice and one of our most popular. Slightly rounded edges at the top and bottom gives this a modern feel which can work well with any kitchen design.

Full Bullnose is fully rounded and is flattering to most decor choices.

Half Bullnose is like the full bullnose edge but only rounded at the top to give a softer appearance.

Demi Bullnose is similar again to the half bullnose, although has a more definitive curve which extends further back the worktop making this edge a timeless classic.

Waterfall Profile offers a gentle flow over the countertop and suits a variety of decor styles.

New York Profile gives a sophisticated look to a kitchen worktop and is ideal for a traditional kitchen.

Ogee Profile provides a detailed decorative edge giving a very distinctive look. It works well with large traditional kitchens.

Shark Nose Profile is another very distinctive look, which gives a floating counter effect. This works well in contemporary kitchens.

Mitred Edge is created using two slabs which are seamlessly joint together at a 45-degree angle to give a thicker continuous appearance to your worktop.

Combination Profiles- Some of our profiles and thickness can be combined to produce an alternative profile. Get in touch with us if this is something you want to discuss further.

Please note that not all profiles are available for the thickness of your worktop. The table below will outline which profile is suitable for the thickness you have selected.

Profile	20mm	30mm

Blanco Maple - Silestone

Backsplash

A quartz backsplash will add a sleek modern look to your kitchen over other alternative materials such as glass and tile. It will provide a whole new dynamic to your design and help to create a focal point; it also serves as a great protection barrier too. This area is continually exposed to splatters from food, liquids, and grease; therefore, our quartz backsplashes are ideal as they require just gentle cleaning with soap and water. Not only this, but our quartz backsplashes are highly resistant to high temperatures compared to other materials which can be used.

So, not only is this the practical option but we can create a backsplash that suits your individual style and design. We have a few choices you can select when adding quartz behind your hob from a curved backsplash that integrates with your worktops, or for a larger kitchen you may want to make a statement by selecting a different backsplash from your worktop which will compliment the design and decor of your kitchen. Our in-house design specialists are on hand to help bring your dream designs to life.

Upstands

Our standard upstands are 100mm and help to blend your worktop to the wall. This offers great protection behind work surfaces and are a great alternative to tiling.

Windowsills

Adding another touch of elegance to your kitchen can be simple with the addition of our quartz windowsills. Not only will it match your worktop perfectly, but it will also offer the same easy care and maintenance that you get with our worktops.

Drainers

The sink area around your worktop is one of your most used areas, therefore you should choose a drainer that is going to fit with the shape of your worktop and with the design of your kitchen.

Here at Project Marble, we have a few options available to you. Your drainer can be flat and the same level as the rest of your worktop or it can be recessed into the quartz whereby it is dropped into the surface by a few millimetres; this means any access water will not spill onto the surrounding surface. Flutes can also be integrated into your drainer, which allow the water to run towards the sink.

This is customisable and you can select how many flutes you require, and we have two design options to choose from - straight or fanned. Your drainer can also be positioned to the left or right of your sink, depending on the design and layout of your kitchen.

**25
Year**

For added peace of mind your PM Select worktop comes with a 25 year warranty on domestic installations. This is done through the manufacturer directly but in conjunction with us. Your worktop must be registered within 6 months of purchase.

Dekton - The ultracompact surface with endless possibilities

Our Dekton Select range is available to view in our showroom

Care & Maintenance

It is inevitable that spillages will occur on your worktop, but the benefit of our PM Select quartz range is that it is virtually maintenance free, its non-porous properties mean it does not harbour any bacteria and does not require sealing. So, it should be simple to keep your worktop looking in great condition for many years to come.

Spillages

Most spillages that come with living in your home, such as food, juice, coffee etc. can be easily cleaned with soap, water and if need be, a mild detergent. For more stubborn stains, gently scrape away the excess with a plastic putty or non-scratch pad and wipe with warm water and soap. For heavier stubborn stains please refer to an expert.

Hot Temperatures

While quartz is highly heat and burn resistant and much more durable than other natural stone materials such as granite and marble.

Exposure to very high temperatures (above 150°C) may cause cracks and scorches due to thermal shock. Therefore, we suggest that hot pans and pots are never set directly onto your worktop.

Not indestructible!

Quartz is extremely hardwearing and durable, but it is worth noting that it is not indestructible! Although, quartz is considered highly scratch resistant, we do recommend that a chopping board is used when preparing food to further protect the surfaces from any scratches.

Avoid exposing your worktop to strong / harsh chemicals and solvents including: Nail Varnish remover, permanent marker / inks, oil soaps, furniture cleaner, paint strippers that contain trichloroethane or methylene chloride.

It is also best to avoid highly abrasive cleaners such as oven/ grill cleaners and chemicals with high alkaline / PH Levels (higher than 11).

If your worktop is accidentally exposed to any of these damaging products, rinse immediately with warm water to neutralise the effect.

Once installed the sheen on your worktop has a natural lustre therefore do not use water repellents or sealants to bring out the sheen. These sealants will provide an artificial shine.

Do not use bleach for maintenance, if bleach remains on the surface for more than 12 hours, the surface may lose its sheen.

It is worth noting that those worktops with a concrete design range may require additional daily cleaning due to distinctive appearance.
